SecLytics.

Reduce Risk, Complexity, Workload, and Cost
With Augur pXDR

Seclytics Augur is a breakthrough pXDR (Predictive Detection & Response) platform that aligns and streamlines SOC workflow and hardens your perimeter. Augur's unique and powerful predictive intelligence gives you exceptional visibility on threats, and the platform also provides smart automation and orchestration to help you beat alert overload and take back control of your **SOC.**

Less Complex. More Capable.
That's pXDR

Augur can replace your TIP, SIEM, and SOAR at a fraction of the cost – without the need to hire new analysts. Not ready for a complete revolution? Augur can slot into your existing infrastructure to improve coverage and streamline operations.

1. Predicts Attacks Before They Happen

Augur identifies threat infrastructure using behavioral profiling and machine learning to predict attacks on average 51 days before launch.
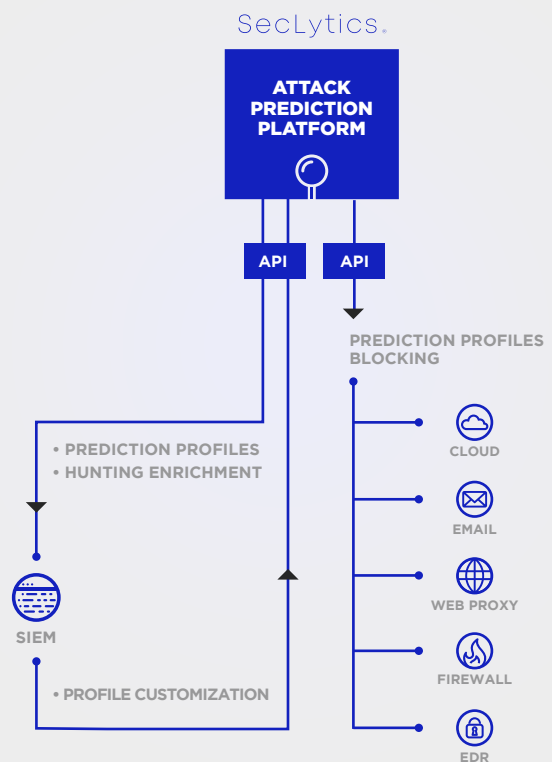

2. Blocks Attacks Automatically

TIPS and SIEMs produce alerts your team must evaluate and act on. Augur integrates directly with most major security platforms and automatically blocks attacks from the threat actors we've identified.

3. Streamlines SOC Operations

Augur blocks Level 1 threats automatically. It also curates and provides enrichment for Level 2 & 3 alerts. And analysts can take action on enforcement across your security perimeter directly from Augur.

Who Can Augur Help?

Is your SOC drowning in alerts?
Are you losing the race to hire more and more analysts to man your security systems?
Are you looking for a solution that will simplify and strengthen your existing security perimeter?

If you answered yes to any of these questions, you'll want to get a demo of Seclytics Augur ASAP to see how pXDR can change the way you do cybersecurity.

Correlating, Evaluating, Automating, and Orchestrating – That's pXDR

Explaining the way the Augur SaaS-based pXDR works is simple:

- We use machine learning to model threat actors' behavior and identify attack infrastructure build-up before attacks are even launched. This powerful and unique data is proprietary Augur

- We correlate that data with threat data from 120 other sources and your own internal data to build and monitor a pool of more than 10,000 adversary profiles and build a uniquely complete map of adversary capabilities and threats

- We leverage this data to accurately predict future attacks (less than 0.01% false-positive rate) and use those predictions to automate enforcement across your security ecosystem

- Augur also uses the data to curate threats that actually need your analysts' attention and provide enrichment data and visualization to help them with IR

- Augur enables your team to implement enforcement measures across your security stack directly from the dashboard
